

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	03 October 2022
Team ID	PNT2022TMID40831
Project Name	Project – Exploratory analysis of rainfall data in India for agriculture
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration via form or email ID and password creation
FR-2	User Confirmation	Confirmation via Email or OTP
FR-3	User Login	Using the registered email ID and password as login credentials
FR-4	Profile Dashboard	Viewing the profile, changing the password and pages navigation
FR-5	Searching	Searching for results and information by place and region
FR-6	Visualization	Visualizing the user-specific data in different forms

FR-7	Prediction	Giving inputs to get the prediction on rainfall using an ML-based model
FR-8	User tracking	Maintaining the history of the user's search operations
FR-9	Feedback & Support	Collecting feedback against the accuracy of the prediction for further improvement and feature inclusion in other modules or functionalities

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	<ul style="list-style-type: none">• The system should administer a quality attribute that assesses how easy user interfaces are to use• The system doesn't expect any technical prerequisites from the user's side
NFR-2	Security	<ul style="list-style-type: none">• User details and login credentials should be safe and secure• The confirmation of a valid user is required for authentication
NFR-3	Reliability	<ul style="list-style-type: none">• Portable and cross-platform independent• The application should be subjected to an experiment, test, or measuring procedure that yields the same results on repeated trials• Easy to use and flexible
NFR-4	Performance	<ul style="list-style-type: none">• The system should handle the traffic efficiently and service requests while consuming less bandwidth• The accuracy of the result of a measurement, calculation, or specification should be dependent the datasets• The page should not take a lot of time to load the contents and display them
NFR-5	Availability	<ul style="list-style-type: none">• The version of the application should be available even at the time of maintenance and updating• The system should run 24 hours a day, 7 days a week [24/7 available]
NFR-6	Scalability	<ul style="list-style-type: none">• The application should be in the way of adding new functionalities or modules without affecting the existing functionalities• The system should be able to manage numerous users at a time and be less prone to errors
